ASSISTANT-EXAMINER: Huang; Po C.

ATTY-AGENT-FIRM: Flehr Hohbach Test Albritton & Herbert LLP

ABSTRACT:

A computer network having a number of workstations running disparate operating systems and a file server having a tape drive for backup and restore of data on the network. The file server runs a generic remote file system (GRFS) and workstations run GRFS agent programs which allow the GRFS file system to access data within a workstation having a given GRFS agent program. The GRFS file system interfaces with each GRFS agent program via a command/response paradigm, with the messages being structured to support the disparate operating systems for backup and restore, to allow data to be interchanged between the disparate operating systems, and to allow independent multiple users of the network to request simultaneously backup or restore.

ASSISTANT-EXAMINER: Rayyan; Susan

ABSTRACT:

A backup system includes backup application software operating on a host computer, which is configurable to store data to be backed up to a backup apparatus. The system is configurable to schedule and enact a pre-backup check, prior to running the actual scheduled backup job so that any faults which have developed since the initial configuration can be remedied. The pre-backup check preferably occurs on a daily basis prior to every scheduled backup job.
